SCIENTIFIC RATIONALE

Aim of the Course is to highlight the most updated developments in EUS and ERCP and their combined use, summed up in the new concept of EURCP which includes a whole world of new ideas and ways to approach the biliopancreatic pathology from both a diagnostic and therapeutic point of view. All this together with the possibility of a deep insight into the new diagnostic and therapeutic ancillary techniques and newly developed devices, such as peroral cholangioscopy and pancreatoscopy, intraductal ultrasound and probe-based confocal laser endomicroscopy, the new LAMS and more.

Participants will be able to see live demonstrations of high quality EUS +/-FNA/FNB procedures, EUS-guided therapeutic and ERCP techniques and at the same time will have a fantastic view into the most recent advances in diagnostic and therapeutic endoscopic management of patients with biliopancreatic diseases.

The theoretical part of the Conference will encompass a varied and comprehensive program of lectures, discussions and video presentations by experts from different countries and the participants will be able to experience and learn about the most important hepato-biliary and pancreatic pathologies and their up-to-date management both clinical and endoscopic.
