

2023 SONO MASTER

Congress Venue

NH Collection Roma Vittorio Veneto
20-21 January 2023

SCIENTIFIC RATIONALE

Over the past 20 years, ultrasound has become a central support for the accurate management of rheumatic diseases in both clinical practice and research settings. Nowadays there is a growing body of evidence supporting the role of ultrasound in the diagnosis and management of primary inflammatory arthritis over the lifespan. In addition to the evaluation of joint involvement in primary arthritis, there is a growing interest in the application of ultrasound for the identification of extra-articular manifestations of connective tissue diseases and vasculitis, to improve the diagnosis and for the evaluation of response to treatment.

The purpose of this master course is to share the latest knowledge for the appropriate use of ultrasound in the field of rheumatic diseases, as well as to provide a practical background for its standardized use.

Implementation in clinical practice of the insights provided during the course will allow standardization of the imaging acquisition technique with the ultimate goal to improve patients' management.

The scientific committee of the congress is proud to host a faculty composed of some of the most renowned international experts in the field. The educational program will include discussion on hot topics, up-to-date practical skills insights with hands-on sessions, which will allow real setting applications and knowledge sharing with the faculty.

The course is intended for medical professionals already skilled to ultrasonography as well as for novices who want to approach the technique in a comprehensive and up-to-date way.
